

Skytrain Düsseldorf Airport Guideway Bridges

After arriving at Düsseldorf Airport's train station, passengers step into a futuristic transportation system gliding them 2,4 km into the Terminal Building. Designing the guideway to merge with the airport's tectonics as well as match the strict requirements of the vehicle was among the many challenging tasks.

Guideway for an automated rapid transit system connecting the train station with the terminal. Developed by Siemens AG for Düsseldorf International Airport.

Owner: Düsseldorf Airport

Design: neuner+graf,
Siemens Transportation

Engineering: neuner + graf, Cons. Eng.

Total Length: 2400 m

max. Span: 36 m
